

Call Sign

Call Sign allows you to distinguish between incoming calls on the same line. You are provided with an Alternate Number (AN) to your existing telephone number. When somebody dials your AN, the telephone on that line will ring with a different cadence to the normal ringing. You can thus determine whom the call is for, or the caller, before answering the phone.

Call Sign is compatible with all BT corded and most BT cordless phones, but may not be compatible with some other equipment. Please check your user manual for your phone.

Notes

Call Sign is available to all single line customers on digital exchanges (System X or AXE10) only.

The service is **not** available if:

- You use a rural exchange
- Your equipment is not compatible with the product
- No spare numbers are available
- You are on an LLU Package

Cost

£1.79 per month (including VAT).
